

# Uberchord - Pairing Fret Zealot

Updated October 16, 2019

[Uberchord - Guitar Lessons](#) is an app produced by Uberchord Engineering GmbH for iOS devices. It is compatible with Fret Zealot for displaying chords, lessons, and song content.

In the Uberchord app, if you are logged in, press the 'profile' icon in the bottom right. From this screen, click the 'settings' gear in the top left.

At the settings screen, you will see a menu item for 'Partners', press this.

On the Partners screen, you will see a toggle for Fret Zealot support. If enabled, this must first be disabled. Turn on your Fret Zealot, then press the button so that orange is visible. In 10 seconds you should see one or more Green LEDs on the fretboard, and this will indicate that the Fret Zealot is connected.
